Photochemical and Photothermal Biosensing with a Hybrid Nanosystem: Gold Nanorods with Isolated Polymerized Proteins. A nanosystem for biosensing was developed based on the cross-linking of isolated, polymerized proteins with gold nanorods, which can be deactivated with a short wavelength visible light source. By the use of this nanosystem, the plasmonic resonance properties of gold nanorods are converted into an optical signal based on the change in the optical absorption spectrum by a variety of biologically relevant analytes, such as DNA and proteins. Furthermore, the photothermal effect of gold nanorods is induced to kill the bacteria, demonstrating the photocatalytic effect of gold nanorods. As the engineered nanosystem is based on self-assembling of proteins, it is capable of minimizing nonspecific interactions with its biological targets, resulting in a high sensitivity. In a racist society. Writing in 1927, African-American poet Langston Hughes called the whites he saw, the white man, the white woman, the white chicken, the white lightning and the white man's grave. And that wasn't even close to the sum of his black observations. James Baldwin once wrote that when blacks wrote their poetry, they were telling white people how they really felt about them. When black people write today, they are telling white people how they really feel about themselves. They are reflecting on their own racist history, getting in touch with their own feelings, seeing their own experiences, and trying to reconcile them with their commitment to racial justice. To that end, Spike Lee's documentary, "When the Levees Broke: A Requiem in Four Acts," is an important and potentially life-changing documentary for the state of Louisiana, but it is also a black love letter to the state, because even in the darkest times, we know how to laugh. In the documentary, we meet NOLA resident Aaron Broussard, a young black man who was born and raised in the city and who is finding love with a white woman. Despite his love for this woman, he tells us
