This was probably the result - it wasn't at all what I was expecting, but it was great! Not only was it easy to put together, it was easy to clean up, and it was absolutely DELICIOUS. It is a sausage-based dish which can be served in a number of ways. I had tried this stuffing at a local party recently, and it was received with approval. I thought, "Oh, well, what would be the difference when I make it at home?" I was amazed at what a difference it makes to simply use a bread recipe that really "tastes like bread" rather than one that is packed with ingredients that have little to do with what I really want. I did make some alterations to the original recipe, including cutting back on the amount of stock and adding the dried rosemary. The bread tastes great and it is lovely stuffed into a whole chicken and roasted. I saw this recipe on Pillsbury's website and loved the flavor combination. I was actually pretty nervous about making this since I've had a few bad experiences with the other stuffings. This recipe had been developed with several child-tested recipes in mind to make a really good stuffing that will be delicious for a family of any size. I made it a while ago, and it's now one of our favorites! This is so tasty! I have a baguette recipe I used for mine and it tasted really good, but this one was much tastier. So glad I found it! I used a baguette instead of a loaf of bread too. It was a perfect size and I think it would be just as good if you just used a loaf and cut it in half. I can't wait to make this again and it will definitely be one of my favorites this time around! I made this last night and loved it! I've been

Q: Do eigenvectors change when I change basis? Let  $STS$  be a linear transformation on  $\mathbb{R}^3$ , and suppose that  $STS$  has an eigenvalue  $\lambda$  with eigenvector  $\mathbf{v}$ . If I consider the linear transformation  $STCirc$  JS, where  $SJS$  is the matrix you get when you simultaneously rotate the basis of  $\mathbb{R}^3$  by an angle  $2\pi/3$  clockwise, then  $STCirc$  JS has an eigenvalue  $\lambda$  with eigenvector  $S\mathbf{v}$ . Question: In terms of linear transformations, if  $STS$  and  $STCirc$  JS have eigenvalues  $\lambda$  and  $\lambda$ , does it follow that  $S\mathbf{v}$  is also an eigenvector of  $STS$ ? I'm inclined to think this is true, because the determinant of  $SJS$  is  $S^{-1}S$ , and  $S\mathbf{v}$  is an eigenvector of  $STCirc$  JS with the same eigenvalue as  $STS$ , so the eigenvalues and eigenvectors of  $STCirc$  JS are related to the eigenvalues and eigenvectors of  $STS$ . Thanks for any help. A: Note that  $ST^T J - TJ = 0$ . Take  $SS^T = I$  and  $ST = \begin{pmatrix} 2/3 & 0 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 0 \end{pmatrix}$  and  $SS^T J = \begin{pmatrix} 1 & -1 & 0 \\ 0 & 1 & 0 \\ 0 & 0 & 1 \end{pmatrix}$ .  $SS^T J$  eigenvalues are  $1$  because  $\det(T) = 1$ . The eigenvectors are  $\mathbf{v}_1 = \begin{pmatrix} 1 \\ 0 \\ 0 \end{pmatrix}$ ,  $\mathbf{v}_2 = \begin{pmatrix} 0 \\ 1 \\ 0 \end{pmatrix}$ ,  $\mathbf{v}_3 = \begin{pmatrix} 0 \\ 0 \\ 1 \end{pmatrix}$ .
