History Viewer Crack+ With Full Keygen

------------ History Viewer is a small, yet efficient tool that allows users to view their Internet and download history. The application sports a small interface that can be mastered even by less experienced users. The main window is minimalist, and is divided into two parts. The left panel offers quick access to the Internet Explorer, Firefox and Google Chrome's URL history, address bar, cookies, downloads and top visited sites, as well as the most recent documents and search, USB storage and history of last visited websites. The right panel allows users to view the websites and documents that have been accessed. Unfortunately, you cannot filter the results by size, date or name. An important feature that is worth mentioning is the possibility of generating reports, provided that you have specified an output destination. The application offers users the possibility of selecting what categories should be included in the final report, such as Internet Explorer, Mozilla Firefox, Google Chrome and Windows files. The reports are exported to HTML file format. During our testing we have noticed that the program can carry out a task pretty quickly and without errors throughout the entire process. As it would be expected from such a small tool, History Viewer manages to remain light on the system resources, hence it doesn't affect the overall performance of the computer. Features: ----------- · Browse history on Windows, Mac OS and Linux · View websites, PDF files, Office documents and emails · Customize the search: Filter URL history and file name results · Export statistics to CSV and PDF file · History Viewer doesn't gather any personal or private information (unless you choose to add a name and password) · History Viewer is free · Runs on Windows XP, Vista, 7, 8 and 10 (32 & 64 bit) · History Viewer requires no installation: Just download and run · History Viewer takes up no bandwidth and can be used with any speed connection · History Viewer can be launched automatically on boot (Windows Vista and above) · History Viewer has no additional resources used by standard computer use · History Viewer runs on low CPU and RAM (approximately 0.1-0.2 GB of RAM, depending on how many applications are running) · History Viewer is portable · History Viewer
